

# Executive Capability Brief

Strategic Sales Operations | Customer Success | CPG Retail Execution | Analytics | AI-Ready Process Transformation

**Privacy Note:** This document uses fictional company names, sample scenarios, and synthetic metrics. It is designed to demonstrate strategic thinking, analytics, workflow design, and leadership approach without disclosing confidential employer or customer information.

## POSITIONING SUMMARY

I operate in the space where revenue strategy meets execution reality: retail requirements, item and pricing workflows, direct-store-delivery operations, order visibility, team accountability, and customer-facing communication. My strongest value is pattern recognition: seeing where work keeps breaking, translating that into a manageable operating system, and helping teams move with less chaos.

Best-fit targets include Senior Manager or Director roles in Sales Operations, Client/Customer Success Operations, Retail Execution, Business Operations, CPG Transformation, and AI-readiness or workflow modernization.

## CORE LEADERSHIP THEMES

| Theme                     | How I create value                                                                                                             |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| Operational Clarity       | Builds KPI systems, trackers, SOPs, and dashboards that turn scattered activity into visible execution.                        |
| Customer & Account Health | Connects stakeholder alignment, service risk, communication cadence, and commercial priorities into account action plans.      |
| Retail Execution          | Understands item setup, pricing, account requirements, promotion timing, order movement, and store-level execution pressure.   |
| Automation Readiness      | Maps manual work into cleaner workflows using tools such as Excel, Planner, SharePoint, Power Automate, Tableau, and Power BI. |
| Change Leadership         | Anticipates adoption friction and creates practical bridges between current behavior and improved process discipline.          |

## TOOLS & SYSTEMS

- Analytics and reporting: Excel, Tableau, Power BI, KPI scorecards, dashboard requirements, trend views, and executive summaries.
- Workflow enablement: Microsoft Planner, SharePoint, Power Automate, Outlook rules, process mapping, dedupe controls, and audit-friendly task tracking.

- Commercial operations: sales/account planning, customer success thinking, pricing communication, item workflow coordination, order visibility, and exception management.
- Leadership practices: coaching, cross-functional alignment, stakeholder communication, change readiness, performance metrics, and practical SOP adoption.

## PUBLIC PORTFOLIO PROJECTS

The companion case studies in this repository are simulated examples. They are not employer records. They show how I structure a business problem, choose measures, define workflow controls, and build practical operating rhythm around a messy process.
