

Portfolio Project Catalog

Public-safe examples of business analysis, workflow transformation, sales operations, and customer success thinking.

Privacy Note: This document uses fictional company names, sample scenarios, and synthetic metrics. It is designed to demonstrate strategic thinking, analytics, workflow design, and leadership approach without disclosing confidential employer or customer information.

HOW TO READ THIS PORTFOLIO

The projects below are designed as fictional, academic-style business simulations. They are not client files, employer files, retailer records, or confidential operating data. Each example is a clean wrapper around transferable skills: business problem definition, KPI design, process mapping, operational communication, dashboard thinking, and executive-level action planning.

#	Project	Scenario	Skills demonstrated
1	PO Intake Automation	Simulated CPG distributor	Workflow design, dedupe logic, Planner/Excel/SharePoint governance, KPI dashboarding
2	DSD Store Execution Scorecard	Synthetic retail account set	Store-level performance, service risk, merchandising execution, exception triage
3	Customer Success Account Health Model	Fictional B2B SaaS/retail operations platform	Adoption risk, QBR logic, stakeholder mapping, renewal/readiness metrics
4	AI Readiness Change Plan	Fictional operations team	Resistance mapping, training path, governance, human-in-the-loop automation design
5	Pricing Workflow Visibility Model	Synthetic multi-banner scenario	Notification windows, status tracking, approval checkpoints, escalation rules

PUBLIC-SAFE POSITIONING LANGUAGE

Suggested language for GitHub, LinkedIn, or interview conversations:

These portfolio projects use fictional company names and synthetic data. They are designed to demonstrate my approach to operational transformation, dashboard design, sales operations, customer success, and AI-ready workflow improvement without disclosing confidential employer or customer information.

NEXT BUILD IDEAS

- Create a one-page dashboard image for each case study so hiring teams can quickly see the operating model.

- Add a short write-up explaining business problem, constraints, decision logic, and measurable outcome model.
- Keep every file clearly labeled as simulated or synthetic.
- Never upload employer documents, retailer files, screenshots of portals, real customer data, real purchase orders, internal price files, or exact process documents.
