

Customer Success Training System - Limited Portfolio Overview

Created by Cernice Robinson | Public-safe overview | Full instructional product withheld

Purpose

I created this customer success training system to show how account health, onboarding, adoption, stakeholder alignment, renewal risk, and dashboard discipline can be taught as an operating system rather than a loose set of tips. This overview is intentionally limited so the training asset remains protected.

What this public version demonstrates

Capability Shown	What the overview proves
Curriculum architecture	The ability to structure a full learning journey from fundamentals to operating rhythm.
Customer success strategy	Practical understanding of account health, adoption signals, risk, renewals, QBRs, and customer outcomes.
KPI thinking	How learning objectives connect to measurable behaviors and business indicators.
Enablement leadership	How complex work can be translated into training, tools, and repeatable decision habits.

Protected content boundary

This public overview does not include the complete module workbook, worksheet templates, scenario data, facilitator notes, scoring model, completed examples, answer keys, learner activities, or capstone prompts. Those materials are intentionally withheld for private delivery, consulting use, or controlled review.

Portfolio positioning

This artifact should be read as proof that I can design customer-facing training, build leadership enablement systems, and connect customer success behaviors to measurable operating outcomes. It is not a full course release.
