

Customer Success Training Curriculum

Designed by Cernice Robinson as a public-safe portfolio demonstration of curriculum design, customer success strategy, operational enablement, KPI thinking, and adult-learning structure.

Confidentiality note: This training overview uses generalized customer success concepts and does not disclose employer data, customer lists, internal workflows, pricing information, or proprietary material.

Curriculum Purpose

The curriculum is built for professionals who need to understand customer success beyond theory: how to define account health, reduce churn risk, structure stakeholder communication, build QBR habits, and translate customer signals into operational action.

11-Module Structure

Module	Name	Learning Focus
01	KPI Audit & Account Health Foundations	Define the customer outcome, identify health indicators, and separate noise from useful risk signals.
02	Customer Onboarding & First Value	Map handoff points, onboarding milestones, and early success criteria.
03	Segmentation & Book-of-Business Strategy	Prioritize accounts using fit, revenue, risk, usage, and growth potential.
04	Adoption & Engagement Signals	Read patterns in usage, communication, and stakeholder activity.
05	Executive Business Reviews / QBRs	Turn account data into a practical customer conversation and action plan.
06	Escalation Management	Structure risk response, ownership, timelines, and executive visibility.
07	Renewal & Churn-Risk Planning	Build renewal readiness and identify preventable churn earlier.
08	Cross-Functional Customer Operations	Connect sales, operations, support, product, finance, and leadership around the customer.
09	Voice of Customer & Feedback Loops	Capture feedback and convert it into internal learning and process improvement.
10	CS Dashboards & Operating Rhythm	Design scorecards, leadership updates, and repeatable customer health reviews.
11	Capstone: Customer Success Operating System	Synthesize the curriculum into a practical customer success operating model.

What this demonstrates

This artifact shows curriculum architecture, customer success logic, KPI design, stakeholder communication, operational transformation thinking, and the ability to teach complex business systems in a structured way.
